DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oka (USPN 5292132).

Oka discloses a golf ball having dimples and lands formed on the surface to improve the flight distance of the golf ball (See Summary of the Invention). The golf ball does not exceed 40 lands in which each land a) has a short side greater than 0.4mm, b) an area greater than 0.8mm^2 , and c) do not contain a part of a dimple or the whole dimple (See Summary of the Invention). Knowing that the area of the land is greater than 0.8mm^2 , the longer side of the land must have a length greater than 2.0mm. Oka also makes it clear that the lands will be about 1/5 of the dimple area which can range as high as 14.5mm^2 (See Summary of the Invention and Table 1). One-fifth of 14.5 is 2.9mm^2 , which clearly includes $1 \times 2.99\text{mm}$, and therefore, would have been obvious. In one embodiment, it is disclosed that the dimples cannot be formed on the parting line (great circle) (See Figure 3 and Column 5, lines 11 through 23). Figure 7 shows overlapping rectangles in which less than half the area of the rectangles. Oka also discloses that the lands may contain two or more rectangles (See Column 5, lines 1 through 7). It would be apparent that the total area of the lands having two or more

rectangle would be satisfied from the above conditions which clearly would satisfy the conditions in any shaped configuration including that of the present invention. Oka also discloses that a typical golf ball would have 280 to 540 dimples and discloses an invention having more than 400 dimples (See Background of the Invention and claim 3). It would appear that having any number of dimples within the prescribed range would be for the purposes of routine optimization for optimizing the flight performance and would be obvious.

Response to Arguments

Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
